

WARNING!

CONTAINS CMOS INTEGRATED CIRCUITS Which Are Subject To Damage By STATIC ELECTRICITY

Discharge yourself to earth ground before touching any part of the circuit board or components.

DO NOT WIRE HOT!

Before any service or installation, disconnect AC and battery power.

Serious damage can result if the circuit board components are touched by a screwdriver, wires or other objects.

Before applying power, double check wiring for possible errors.

NO AUXILIARY POWER IS AVAILABLE FROM THIS UNIT

Do not connect anything directly to the standby battery.

If you do, your results will be experimental!

If you do not have an excellent earth ground, the unit can produce random or continuous problems. Common ground points must measure less than 1 (one) ohm.

Use only sealed, lead acid batteries rated 12 VDC. These batteries must be replaced every 4 years. Do not use Ni-Cad or dry cells as they WILL explode!
